

FEEDING AND VEGETABLE GARDEN PROJECT

Community Development is one of the four focus areas of Community Chest. Our aim is to uplift, empower and mentor our beneficiaries to become sustainable.

Feeding projects is of fundamental importance as this is the sole hope of survival for thousands of people.

The drought we are experiencing is a major threat to our food security.

As a result thereof food prices are exorbitant and the vulnerable is negatively impacted. Community Chest would like to start up vegetable gardens at all our feeding projects in the metro. Not only will they be able to feed thousands of people but it will improve the health of the community. There is a great nutritional value in vegetables.

Our objective is to mentor the feeding schemes on how to start up vegetable gardens.

With the training we will supply:

1. JoJo tanks and irrigation systems
2. Gardening tools
3. Seedlings
4. Tips on basic agriculture
